Custom Name to Coordinates

posted Mar 30, 2015, 1:55 PM by Adrian Brightmoore [updated Apr 1, 2015, 5:52 PM]

Despite the clunky name, this is a general purpose filter to embed co-ordinates as a string in the CustomName (or other) field of a Tile Entity.

The simplest use case is to add display co-ordinates to a Command Block so when it logs to the admin log, you can see which command block is 'talking' instead of having them all named '[@]'

Test it in a backup world and let me know what you think!

Based on /u/piotrex43 request <http://redd.it/2qphsz>
