

[MCEdit Filters](#) >

SchematicBlockSwap

posted Jan 8, 2016, 10:14 PM by Adrian Brightmoore [updated Jan 8, 2016, 10:15 PM]

This filter creates new schematic files from a directory of source schematics, with the wood blocks and leaf blocks swapped and matched to each other. You end up with many different material variations from the same base model.

This filter is for enumerating all block variants of [Lentebriesje's](#) tree library:
