Amazed

posted Jul 27, 2013, 10:45 PM by Adrian Brightmoore [updated Nov 26, 2013, 9:17 PM]

2D mazes are so 20th century. 3D is where it's at.

Version 2 adds a property to create more intersections by purging walls randomly after maze generation.

Version 3 implements Prim's algorithm so the maze is more maze-like and less tunnel-like. Excellent!

Version 4 allows you to specify different materials for each direction of wall/floor/roof.
