## Crater

posted Jun 2, 2013, 11:12 AM by Adrian Brightmoore [ updated Jun 2, 2013, 3:52 PM ]

This filter makes a crater-like depression in the Minecraft surface. The selection box needs to be deeper than the radius of the crater or odd things happen in the middle of the crater. I left this in just in case you like odd things.

Suggested by SmeltScape on YouTube.

If you want a more tapered crater, use Flylands and discard the island.
